

MODEL PS-2020

# *Machine Readable Pay Station*

## FEATURES:

- Unattended operation
- Multiple Operational Use –
  - With Optional Credit Card
  - Optional Note Acceptor w/ self-replenishing dispenser
  - Optional Coin Acceptor w/ self-replenishing dispenser
- Also ideal for "Pre-Pay" or "Pay In Lane" applications
- Rust resistant zinc plated heavy-duty steel construction
- Built-In heater
- Large Resistive type touch screen CRT displays instructions, Date & Time, Fee Due, & optional programmable message(s)
- Optional Intercom (recommended)
- On-Line Operation
- Accepts 4 or 7 mil thick tickets, from TD-6030 and TD-3020 Ticket Machines
- PCI Compliant

**I. Purpose:**

The **EPS** Model PS-2020 Pay Station is a revenue control device that provides for rapid and accurate collection of the parking fee due prior to exit from the parking facility. The parking fee is satisfied through the use of the parking patron's credit card or currency, and is accomplished without the need for an attendant or cashier. Upon completion of the payment transaction, a "validated" ticket is issued to the patron for use at an exit lane Exit Verifier, which will cause a barrier gate to open, and allow egress from the facility.

**II. Features & Functions:**

- A. Inserting the barcode ticket into the device's barcode scanner transport activates the PS-2020 Pay Station. This is the ticket that was issued to the parking patron upon entry to the facility from the TD-6030P ticket machine.
- B. The **EPS** Model PS-2020 Pay Station reads the barcode ticket, then calculates and displays the parking fee due to the parking patron. It then instructs the patron to insert their credit card, or insert US currency to satisfy the fee due.
- C. After inserting and removing their magnetically encoded credit card within the PS-2020, or inserting the US currency sufficient to satisfy the fee due, the Pay Station will produce a detailed paper receipt for the patron, and issue a barcode ticket for the patron's use at the exit lane's Exit Verifier.

**III. Physical Description:**

- A. The PS-2020 Pay Station's overall dimensions are 27" wide, by 17.5" deep, by 60" in height. It weighs 295 lbs.
- B. The electrical power requirements for the PS-2020 are 115VAC at 60Hz, or optional 220VAC at 50Hz. An internal UL approved step-down transformer converts this current into the 24VDC required to power all of the electrical circuitry within the device.
- C. The **EPS** PS-2020 Pay Station contains a microprocessor-controlled mechanism that includes a date/time clock/calendar. This microprocessor may be programmed with its operating parameters remotely, via an available RS-232 serial communications connection (Optional remote PC access software required).
- D. The PS-2020 Pay Station is constructed of heavy duty rolled steel, which is zinc plated for rust inhibition, and then powder coated with sealing rust resistant paint.
