# Timed Exit Pass System

This system is ideal for applications requiring controlled access of visitors in a parking facility. The timed exit pass requires that the visitor leave within the time allowed by the validation printer or the pass will expire. If an expired pass is inserted into the exit pass verifier, an LCD display on the verifier will instruct the driver to return to the parking attendant.

1. The patron takes a ticket from the TD6030P ticket machine causing the model 301 entrance gate to open allowing entry to the parking facility.

2. When the patron is ready to exit, they give the entry ticket to an attendant. The attendant inserts the entry ticket into an MV-2020 exit pass printer and a new bar code is printed on the same ticket. This ticket will be used to exit. The expiration time is set by dip switches on the MV-2020.

3. The patron inserts the validated ticket into an EXP-1010 or XV-2020 exit pass verifier to raise the 301 exit gate allowing the patron to exit. If the exit pass has expired, the LCD display on the exit verifier will instruct the patron to return to an attendant and have the ticket validated again.
